## 250mA Low consumption Linear Regulator

### Description

ACE523C series is a group of positive voltage output, low power consumption, low dropout voltage, three terminal regulator. It can provide 200mA output current when input / output voltage differential drops to 418mV ( $V_{out}=3.3V$ ), and it also provides fold back short-circuit protection and output current limit function. The very low power consumption of ACE523C ( $I_q=3\mu A$ ) can greatly improve natural life of batteries.

ACE523C can provide output value in the range of 1.2V~5.0V in 0.1V steps. It also can customize on command.

ACE523C includes high accuracy voltage reference, error amplifier, and current limit circuit and output driver module.

ACE523C has well load transient response and good temperature characteristic, And it uses trimming technique to guarantee output voltage accuracy within  $\pm 2\%$ .

### Block Diagram

### Explanation

ACE523C is a series of low dropout voltage and low power consumption three pins regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

Current Limit module can keep chip and power system away from danger when load current is more than 500mA.

ACE523C uses trimming technique to assure the accuracy of output value within  $\pm 2\%$ , at the same time, temperature compensation is elaborately considered in this chip, which makes ACE523C's temperature coefficient within 100ppm/°C.
